

Moon Landing ----- Instructions for Compass Rose Direction Finder

Color then cut out a rocket ship. Glue or tape your rocket ship on one end of a paper clip, leaving one loop of the paper clip showing at the bottom of the rocket. Use a pencil to hold the rocket ship in place at the center of the Compass Rose by placing it through the paper clip loop. You will be able to turn the rocket ship in either direction (to the right or to the left) to determine which heading you need to turn your rocket toward the moon landing point.

Note:

Copy the compass rose onto transparency film to demonstrate its use to the class. Use the rocket to show samples of turns and to answer questions.
